Group Project Part 1: Speaking Assessment

SAT101 AI Application Design

Assignment:

Give a presentation about the AI application designed on the module and answer follow-up questions

Time:

Semester 1 Week 13; LMO PPT submission: Monday 23:59, Week 12

Assessment Details

Assessment Type: Group presentation and Q and A; Individual grading
Percentage of module mark: 20 %
Learning Outcomes assessed: A, B, E, F
Duration: 5 minutes for the presentation, up to 10 minutes for the questions, 15 minutes in total

Assessment Task

Part 1 Group presentation (5 minutes)

Core requirements
Each group is required to prepare and deliver a single PowerPoint presentation as part of the module assessment. The presentation should be concise, well-structured, and clearly communicate the key elements of your AI-powered application project. You will work together to create one PowerPoint file, and each group member will be responsible for presenting one or two slides, with the total number of slides not exceeding ten. This ensures that each speaker has a clear and focused contribution while maintaining the overall coherence of the presentation.

The content of the presentation must cover five key sections. First, an Introduction that provides an overview of your project and its purpose. Next, the Problem & Solution section, where you define the issue your project addresses and explain how your AI application offers a solution. Then, the Operating Principles section, which describes how your AI-powered application functions. This should be followed by a section on Technical Development & Roles, where you outline the development process and clearly explain the role each group member played. Finally, the Summary, Future Directions, and Implications section should summarize your findings, discuss the potential future of your project, and reflect on its broader impact.

Each section presented by a group member must include at least one citation, with the corresponding reference listed in IEEE referencing style. The presentation should be delivered

in English, and the file must be named according to the format SAT101-S1-group number, for example, SAT101-S1-Group3.pptx.

Part 2 Follow-Up Questions (10 minutes)

After the presentation, your group will be asked to answer at least three detailed follow-up questions from the examiner. These questions will be based on three main areas: the content of your presentation, particularly any parts that may have been unclear or could be expanded further; the way your group approached the project, including your research process, report writing, and presentation planning and practice; and a reflection on your project, including any challenges you encountered and how you resolved them, as well as any lessons you learned.

This part of the assessment is designed to test your understanding, critical thinking, and communication skills, as well as your ability to collaborate effectively and reflect on your group work. It is important that your group prepares thoroughly for both the presentation and the follow-up discussion, ensuring that all members are ready to respond thoughtfully and confidently.

Assessment Timeline

Semester 1

Week 4: The Task Sheet will be released on LMO
Week 3-9: Lessons will review presentation skills and PPT design
Week 12: PPT submission on LMO
Week 13 (Monday and Tuesday): Speaking practice with feedback
Weeks 13 (Wednesday, Thursday and Friday): Assessed group presentations

Further details

- Include your full names and student ID numbers on the first slide of PPT.
- Keep visuals clear and minimal.
- This task is one part of your module-long assessments along with the writing and other components. For information about the other work, you need to do for the module, please see the assessment Task sheets.
- You must upload a PowerPoint by 23:59 Monday in W12. If you miss the deadline, you will have to give your presentation without a PPT. You will not be allowed to bring the PPT to the exam and your grade may be affected.
- You must show your student ID card to your examiner in the exam. If photographs, names or ID numbers are no longer clear on your identification, you may be refused admission to the exam.
- You must not read from a script or from notes during your presentation. You may refer to your PPT for information, but not read directly from it.
- If you are late, you will not be allowed to take the exam. Your speaking assessment cannot be rescheduled if you are absent or late.
- If you miss your speaking assessment, you may be able to apply for mitigating circumstances. Please see 'Section C: Further Information' in the module handbook for details on LMO.
- For information about how your assessments are marked, please refer to the marking descriptor on page 3.
- Information about the design, structure, content and skills necessary for a good presentation will be given in class. It is important that you attend your classes and carefully study the resources provided on the module LMO page.
- You should aim to make your presentation understandable to a non-specialist audience. This may involve defining or explaining some technical terms if necessary, and not assuming your audience already knows a lot about the technology.
- Timing in your presentation is very important and you should aim to try to finish all elements of the presentation within the given time. It is important to practice your presentation by paying special attention to timing.
- Remember to use your PPT when giving your presentation and to draw the examiner's attention to the relevant sections.
- Remember to give detailed answers to any questions you are asked in the exam. Aim to speak for at least one minute for each question.
- You can answer any of the questions but should also allow the other members of your group to speak, as you will be graded individually.
- If you have more to say, you can keep talking for longer. The examiner will stop you when they want to move onto the next question.

Marking Descriptor

	Presentation	Content	Participation and Fluency	Grammar & Vocabulary	Pronunciation
20	Informative and descriptive information is chosen for the presentation. Critical thinking is evident.	Answers are clearly stated, relevant and supported with appropriate details and examples, showing critical thinking and wider knowledge of the topic.	**Speaks at length without effort.** Contributes to the discussion on at least 3 occasions and speaks at length. Interacts with other group members showing leadership, active listening, turn-taking or conflict resolution	**Uses a wide range of complex structures and less common lexis. Grammar and vocabulary are mostly error free**, and any errors are minor.	**Is easy to understand throughout**. Varies prosodic features to convey meaning. Other features of connected speech are present but may not be sustained. There are only occasional systematic errors.
15	There are no irrelevancies or omissions, and some critical thinking is evident, but time could be used more efficiently, and info could be chosen more aptly.	Answers are developed in some details, directly address the questions and show some wider knowledge of the topic.	Speaks at length with little effort. Contributes to the discussion and interacts with others on at least 2 occasions; builds upon their ideas by clearly agreeing with, disagreeing with or querying what they said.	Uses a range of complex structures and some topic-specific and less common lexis. Errors may be frequent but **do not reduce clarity**.	Is almost always easy to understand, but there may be consistent mispronunciation of a particular word/sound. Varies prosodic features to convey meaning, but with some systematic errors.
10	There may be minor irrelevancies or omissions resulting in slight over- or underdevelopment of some ideas. **Include at least 1 citation with its corresponding reference in IEEE format.**	Presents at least 1 clear idea to answer questions, with details and / or examples.	Has at least 1 meaningful interaction building on what another student says. Produces stretches of fluent language. Hesitations and reformulations often sound natural.	**Lexical range includes topic-specific vocab** and is wide enough to discuss given topics without relying on frequent unnecessary repetition**.** Uses a range of complex structures. Errors may be frequent but **rarely reduce clarity**.	Clarity is occasionally reduced due to the mispronunciation of individual words/sounds. **Can often vary prosodic features to convey meaning**, but with systematic errors.
5	Ideas are presented but some sections may be over- or underdeveloped. And some ideas are unclear, undeveloped, or illogical. **Presentation PPT is missing or of does not meet requirements.**	Ideas are presented but may be over- or underdeveloped. Some ideas are unclear, undeveloped, or illogical.	**Produces some fluent language**, but with some unnatural sounding hesitations. Either fails to contribute sufficiently **<u>or</u>** fails to interact meaningfully with other students	Uses a few different kinds of complex structures. Lexical range is sufficient to discuss the given topic, but there is reliance on repetition. Errors may be frequent and sometimes reduce clarity.	Clarity is sometimes reduced due to the frequent mispronunciation of individual words/sounds. Prosodic features are occasionally used with some effectiveness.
0	Most ideas are unclear, undeveloped, or illogical.	Any ideas are unclear, undeveloped, or illogical.	Does not participate meaningfully in the discussion	Grammar structures and lexis are insufficient to allow communication on the topic.	Understanding requires effort due to the frequent mispronunciation of individual words/sounds. Prosodic features may be attempted, but effectiveness is limited.
